

Database of asteroid absolute magnitudes and slopes (AAMS)

D. A. Oszkiewicz

Introduction

This catalogue contains photometric parameters (absolute magnitudes and slopes) and their error estimates for 421,496 asteroids. The phase curves have been obtained from the re-calibrated Minor Planet Center photometry. The re-calibrated photometric data have been fitted with three phase functions: (H,G) , (H,G_1,G_2) , and (H,G_{12}) .

For the description of the phase functions please see Muinonen et al. [2010] (ADS abstract available here). For the description of the calibration and fitting procedures please see Oszkiewicz et al. [2011] (ADS abstract available here). Other related articles are Oszkiewicz et al. [2012] (ADS abstract available here), and E. Bowell et al. [2012].

If you are planning to use this catalogue please refer to Oszkiewicz et al. [2011] and Muinonen et al. [2010]. For the post-processing of the catalogue: please note that the re-calibrated data are of low precision (roughly around 0.1 mag) and accuracy (roughly around 0.2–0.3 mag) which is reflected in the photometric parameters accuracy. If you have any questions concerning the database usage please contact the author.

The Catalog Format

The catalog is distributed as zipped ASCII file with one record (line) per object at <http://wiki.helsinki.fi/display/PSR/Asteroid+absolute+magnitude+and+slope>. Values are separated with space and missing values coded with –999999. Records are ordered by the designation number*, and each record contains:

*A temporary designation is used for asteroids without a designation number. The two first numbers of the temporary designation are left out, and the rest is concatenated together, e.g., temporary designation for object 2000 AC 229 is 00AC229.

Column	Description
1	Asteroid designation*
—	H,G phase function —
2	H absolute magnitude
3	G slope parameter
4	H absolute magnitude right sided error
5	H absolute magnitude left sided error
6	G slope parameter right sided error
7	G slope parameter left sided error
8	rms
9	convergence flag (0 – not converged, 1 – converged)
—	H,G_1,G_2 phase function —
10	H absolute magnitude
11	G_1 photometric parameter
12	G_2 photometric parameter
13	H absolute magnitude right sided error
14	H absolute magnitude left sided error
15	G_1 slope parameter right sided error
16	G_1 slope parameter left sided error
17	G_2 slope parameter right sided error
18	G_2 slope parameter left sided error
19	rms
20	convergence flag (0 – not converged, 1 – converged)
—	H,G_{12} phase function —
21	H absolute magnitude
22	G_{12} slope parameter
23	H absolute magnitude right sided error
24	H absolute magnitude left sided error
25	G_{12} slope parameter right sided error
26	G_{12} slope parameter left sided error
27	rms
28	convergence flag (0 – not converged, 1 – converged)
